Dietary Supplement

**What is the difference between Whey Power Plus®, Whey Protein isolate and Whey Protein concentrate products?*

Whey Power Plus® Contains whey protein isolate, which is the purest and most absorbable form of whey protein, and is fat, lactose and cholesterol free.*

Whey Power Plus® Our whey protein isolate powder is sweetened with non-bitter stevia for a delicious taste. Stevia has no calories, no side effects, and does not cause blood sugar increases. This is a wonderful protein product for anyone watching their diet, and concerned about food quality and safety.*

Whey Power Plus® is processed using the superior and more expensive cross-flow-micro-filtration technique, using no chemicals and no heat. Our whey protein isolate is highly undenatured, with almost 100% of all the whey sub-fractions intact, including the powerful immune booster lactoferrin. Whereas, whey protein is a cheaper product, containing fat and casein. Whey protein is normally made using ion exchange and contains the inferior whey protein not whey protein isolate.*
